### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Allowable Subject Matter*

1. The indicated allowability of claims 2-8 and 10-15 is withdrawn in view of the newly discovered reference(s) to Heyring (WO95/11813). Rejections based on the newly cited reference(s) follow.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Heyring, et al. (WO95/11813).

Heyring discloses a ground contact load control apparatus for a vehicle comprising structure such as a front and rear, left and right load bearing means and/or hydraulic cylinders 13, 14, 17, 18; load changing means which can operate to change the load supported by each of the load bearing means; a vehicle state sensing means; and a control means, characterized in that a load changing means which can increase or decrease the ground contact load of any pair of diagonally opposed wheels and the ground contact load of the other pair of diagonally opposed wheels in opposite directions from each other and which can increase or decrease the ground contact load of diagonally opposed wheels in the same direction is employed as the load changing means, see [abstract]. The control means comprises an operating amount determining means which determines the operating amount of the load changing means

in accordance with a signal from the vehicle state sensing means. Heyring discloses an accumulator 21, 22, 27, 28. Regarding claims 12 and 14, Heyring teaches the control unit receives inputs to various parameters, see [page 20 lines 5-6].

***Allowable Subject Matter***

4. Claims 16 and 17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Faye M. Fleming whose telephone number is (571) 272-6672. The examiner can normally be reached on M-F (9:00-5:00).
